***Specification***

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, **if any**.

The status of the parent application(s) and/or any other application(s) cross-referenced to this application, **if any**, should be updated in a timely manner.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5, 11, 13, 7 and 17-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 5, 11 and 13 are indefinite in the recitation of "is deposited" as it is unclear on what these substances are being deposited.

Claims 7 and 17-22 are incomplete process claims. The step of treating "by the use of" a composition are not sufficiently descriptive. The claims should have an actual step of contact between the gas material and the catalyst composition.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-22 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by either US 6,489,259 or US 2002/0086793, both to Labarge et al.

The instantly claimed composition and exhaust gas treatment process involve a catalyst composition comprising copper, ZSM-5, beta zeolite and optionally promoters such as phosphorus, cerium and boron. The apparent novelty resides in the catalyst composition.

The Labarge et al. references are considered to anticipate the claimed invention. The references disclose exhaust gas catalyst compositions comprising mixed ZSM-5 and zeolite beta catalysts promoted with copper and phosphorus. The disclosed third, fourth and fifth components read directly on the herein claimed zeolites. The recited amounts of components are embraced by the reference disclosure and are anticipated at the point of overlap. The ratios of silica to alumina are also directly in the range

claimed herein by applicant. Accordingly, the claims are anticipated by the Labarge et al. references. See particularly columns 4 and 5 of the patent and paragraphs [0016] – [0027] of the Patent Application Publication document.

### ***Conclusion***

Applicants are advised that any evidence to be provided under 37 CFR 1.131 or 1.132 and any amendments to the claims and specification should be submitted prior to final rejection to be considered timely. It is anticipated that the next office action will be a final rejection.
